

### REALFORM simulated rock

- A unique, hand sculptured climbing surface that simulates the curvature and complexity of natural rock
- Sculpted using resinous concrete on a fibreglass base to provide strength and durability.
- Flakes, crack systems, tufas, pockets and edges can be incorporated to recreate any rock type or style of climbing.
- 5 – 12 bolt on hold fixing points per m<sup>2</sup> according to the level of featuring.
- Provides a striking aesthetic finish with seamless surface, customised shaping and unique design qualities.
- Can be used to create any type of climbing structure and this system is ideal for outdoor use.
- System designed in accordance with the European Standard for Artificial Climbing Structures EN 12572
